ARMY OBJECTIVES – SV04

Concept Development

- Exercise and verify Joint interdependence through joint command and control, joint fires, focused logistics, joint ISR, joint SOF, etc. (especially service-unique or Title X-mandated services)
- Identify gaps between Naval concepts and Army concepts for future resolution
- Insure the employment of all Army forcible entry forces (airborne and air assault, Stryker and FCS-equipped Units of Action) is consistent with Joint and Army Future Force Concepts
- Employ and sustain Army forces from Sea Base and test other initiatives such as the Afloat Forward Staging Base and the Army Regional Flotilla

Materiel and Technology

- Identify additional capabilities necessary to conduct JFEO (add to the list already in the JFEO JIC, Section 4)
- Exercise emerging mobility enhancement technologies (TSV, HSV, SDHSS, AMT, HVTOL/SSTOL, etc.)

Desired Outcomes

- Expand the dialogue with MCDCC on JFEO to further cement USMC/Army common position on the Joint Integrating Concept and to increase mutual understanding of service concepts
- Set the stage for future JFEO exercises, and experiments
- Use SV04 as a means to validate and modify Army FE White Paper and continue the work of the FE Panel (including a possible JFEO FTX with XVIIIth Abn Corps in October 2004 AWE)
